

CCAC Holds Webinar on Oil and Gas Methane Partners

On Tuesday, January 14, CCAC partners (including Canada, UK, Sweden, US, Norway, and the Environmental Defense Fund) conducted a webinar for interested companies on the new CCAC Oil and Gas Methane Partnership. This Partnership, which was developed through a year-long consultation with a variety of oil and gas companies, IPIECA, and several key CCAC partners, aims to work with participating companies to more fully understand and reduce companies' methane emissions. The Partnership will be launched in 2014.

More than a dozen companies participated in the January 14 webinar. The slide deck can be found at <http://bit.ly/1fh3vrs>.

The Climate and Clean Air Coalition is a voluntary global partnership of governments, intergovernmental organizations, businesses, scientific institutions and civil society committed to catalyzing concrete, substantial action to reduce Short Lived Climate Pollutants (including methane, black carbon and many hydrofluorocarbons). The Coalition has [11 initiatives](#) working to raise awareness, mobilize resources and lead transformative actions in key emitting and cross cutting sectors. SLCP reduction must go hand in hand with deep and persistent cuts to carbon dioxide and other long-lived greenhouse gases if we are to stay under a 2 degrees Celsius warming limit.
